

Running a JazzQuiz session

Starting the session

When you open a JazzQuiz activity as teacher, you can start a session, from the view tab which is default. If you are going to use only improvised questions, there is no need to edit the quiz.

1. Write a name for the session
2. Click «Start Session»
3. You get brief instructions, which you can read while the students connect.
4. When you are confident that the students have joined, click «Start quiz».

Students may still join after the quiz has started, but it is good if everyone feel that they are ready when the quiz starts.

Starting the first question

When the quiz starts, you will have 4 options. Their functionality is as described below:

Improvise

Opens a dropdown menu where you may select an improvised question to start.

Jump

Opens a dropdown menu where you may jump to any question in the quiz.

Next

Starts the next question in the quiz. In this case, the first question.

Fullscreen.

Shows the results in fullscreen. Optimised for viewing with a projector. When a question is ongoing, the results will not appear. This is to avoid students copying answers. The results will be visible once the question is over.

During a question

While a question is ongoing, you will have 3 options. Their functionality is as described below:

End

Ends the currently active question.

Show responses / Hide responses

Show or hide the responses.

Fullscreen

Toggle fullscreen mode.

Reviewing

This is when the instructor has the most control.

Reviewing the answers, the teacher can prune the answer set in two ways.

1. Clicking the answer itself, dims it, indicating that it should be ignored.
2. Clicking the bar (counter) starts a merge. The second bar to be clicked will be merged into the first one (adding the counts together).

All of these control buttons are activated:

Re-poll

Start the previously asked question again. This is treated as a new question, so the previous responses are kept for future review.

Vote

Initiate a vote where students will be presented with the responses you have selected. Dimmed answers are excluded from the vote, and merged ones will count as one.

Improvise**Jump****Refresh**

Updates the responses. To make sure no answer was left behind.

Fullscreen**Show answer / Hide answer**

Shows or hides the correct answer for the question.

Show responses / Hide responses**Voting**

After you have selected the options, click on **Vote** to start the voting process.

While voting is ongoing, the following buttons are activated:

End

Ends the vote, and shows you the final results.

Fullscreen**Show responses / Hide responses**
