

Creating a new Quiz

CAPQuiz is an activity module, and a quiz is created like other activities. Creating the quiz, the teacher gets a view where he can choose either

1. to copy an existing question list template as the basis for the new quiz.
2. to create a new question list from scratch.

Create Question List

The quiz needs a title and a description. The teacher must also select the rating thresholds for student achievement. The students will get up to five stars along the way, and the threshold must be set for each star. These may be changed later. When the setup is complete, the teacher enters the [Editing a Quiz](#) interface.
